

# Flavor Burst® Slush Systems

## Nice Ice®

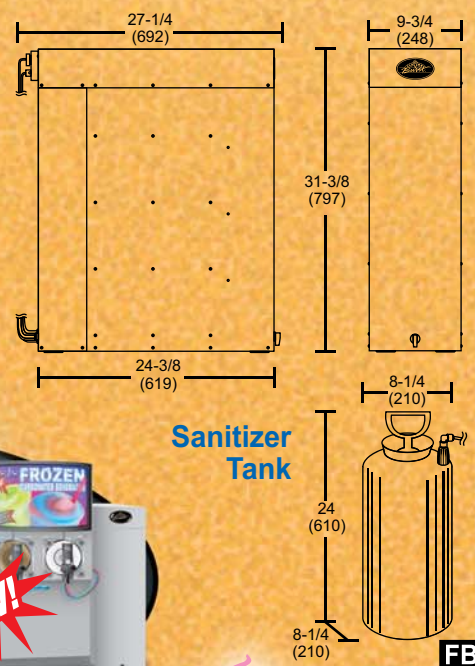

Flavor Burst® puts flavor first. Flavorings are packaged in triple-layer bags for long, stable shelf life that requires no refrigeration. One gallon of flavoring yields up to 104 finished 16 oz. servings! New flavors are simple to insert and lock into place - choose from a variety of flavors available that will attract both adults and kids alike!

The system is easy to install and operate. Simply select the flavor of choice on the electronic keypad, and concentrated flavorings are injected throughout the product as it is dispensed. Flavor output is adjustable for flow and taste. Each system is built with easy-to-wipe-clean, all stainless steel cabinetry. With both clean and sanitize-in-place functions, cleaning requires only a few minutes a day.

In addition to our traditional 8-flavor systems, our MX series splits the output to serve two separate freezer barrels or support both soft-serve and frozen beverage programs. Also, direct-injection kits enable our frozen beverage systems to complement many popular frozen carbonated beverage machines. Expand any menu with sensational flavors using the smallest space possible with an innovative Flavor Burst® system!

### Cabinet NOTE: FIGURES IN PARENTHESES INDICATE MILLIMETERS
